Then why did they upgrade my MSN which was working fine for around a month. Because they made a new one while I was on vacation. They must be trying to get rid of all the viruses that were infecting people. They are using whatever upgrade they can find to hack everyone. This is not an upgrade it is a reinstallation of the same virus. One of the most major problems is that I have a screen resolution of 1280 x 1024, and this program is still trying to force me to use a smaller resolution. I had a problem where the file started out fine and it was all good, and I thought that this was the latest version of the program, but I think it was just a corrupted version, and I had to reinstall it. I was using Blender VSE. I am working on a Script that brings the dynamic range for an audio track up. It has a scripting interface that helps in many ways. This includes the possibility to edit complex sequences. The Script itself has an interface that makes it very easy to operate. So you have many possibilities to control the script. I would like to say that I really like the power of Blender and how much it can do. I do not think that Nuke is comparable. I believe that Blender is way better. I would like to see more distribution for Blender 2. This distribution would make it easier for artists to exchange files. In Blender 2 the scripts will work if you have a shared directory. In Nuke the scripts will work only with a shared version. Nuke has the ability to export all scripts and to import them into a shared version, but Blender does not have this feature. In Blender 2 the scripts are limited to just a few parameters like the value of the clip or the value of the fader. In the Blender 2 version of the scripting interface I would like to see the possibility to interact with the clips of the timeline. There are many features that are not present in Nuke, and I would like to see these features in Nuke. Now let us talk about the windows that I see in the Nuke interface. The main window looks like a camera with the exposure meter, the histogram, the waveform, the color bars, the frequency analyzer, the keyer and the mouse. The Scripts window has a title bar with the letters that are used in the script. It has some 82157476af
