

---

As a veterinary student, I spend almost all of my days in the lab with teaching materials. I am surrounded by sheep, pigs, rats and cats. Sometimes I find myself wishing for something different to distract me from all the text book page flipping. I have always been fascinated by the workings of the human body, but because of the textbook restrictions, I had to give up some of my more interesting life interests.

I know that most people want to use their books and educational examples only for productive learning and that does not usually include studying anatomy. However, I am ready to prove that it's possible for any student to get an education while enjoying himself. While reading this book, you will learn more than you think you can learn through formal education on human anatomy alone. Most of the human body is soft and not made of steel like the bones. It can be quite hard to take a keen interest in the study of soft tissue. That's where this book comes in. I will keep your interest by offering interesting stories, observations and comparisons between humans and other animals, as well as using real life examples to show how human anatomy can be applied to veterinary medicine.

I have learned a great deal from other authors on anatomy and physiology so I am sure that you will learn a lot from me as well. I want to provide an alternative text book for those who prefer reading than sitting through hours of lectures and who would like to take advantage of such an abundant resource as the Internet.

I believe that this book may act as both an entertainment and learning tool for any student who is eager to get involved in the study of human anatomy. I hope that this book will help you become more than just an ordinary human being.

Mihail Ivashov, D.V.M., M.S.

#### PREFACE

As far back as I can remember, I have always been fascinated by the workings of the human body and how it functions to keep us alive and healthy everyday. This has influenced my choice of career path to become a veterinarian (DVM) because I wanted to be able to help people maintain good health through preventive care for their pets. Therefore, the study of anatomy is one of my most important parts of veterinary school. The amount of time spent studying it can be overwhelming at times, so I have always found something to keep my attention fixed on the subject matter. Sometimes this takes the form of writing notes to myself or other students in funny ways.

During lectures, I constantly find myself drawing funny pictures under words in my text books and writing humorous sentences or phrases next to them. This has given me a unique perspective on understanding and applying the information that we need to learn as veterinary students.
